

nanoscale synthesis

exploring chemical space with
high throughput and ultra-low
volume reactions

 **sptlabtech**

 **sptlabtech**

low-volume liquid handling with mosquito®

simplified assay miniaturisation with a user-friendly instrument

easily accessible low volume pipetting

eliminate cross-contamination

disposable pipettes for ensuring reaction integrity

maximising reagent use and preserving precious sample

ultra low dead volumes as low as 0.2 µL

high throughput plate preparation

rapid plate to plate pipetting motion and tip exchange

aspirate, dispense and even mix in any SBS plate type or format

versatile at low volume

accuracy and precision, irrespective of liquid class

true positive-displacement pipetting

accelerating the pace of medicinal chemistry and HT chemical synthesis

- more reactions with less material
- synthesize 10-100 times more analogues
- explore 10-100 times more reaction conditions
- rapidly discover high yielding reaction conditions
- accelerate lead optimisation by coupling with biological assays
- map reaction space to generate predictive models
- easily design your experiments with the nanoChem reaction planner software
